Normalized solutions, ground state solutions, and beyond

ABSTRACT

I shall discuss several joint results in collaboration with Xianhua Tang, Sitong Chen and Dongdong Qin. The main topics of my talk are: (i) ground states and geometrically distinct solutions for periodic Choquard-Pekar equations; (ii) normalized solutions for the planar Schrodinger-Poisson system with critical exponential growth, and (iii) ground states for quasilinear equations with critical exponential growth and lack of compactness. Some perspectives and open problems are discussed in the final part of my talk.
