Journal of Mathematical Analysis and Applications

www.elsevier.com/locate/jmaa

Editorial

This special issue of the Journal of Mathematical Analysis and Applications is dedicated to recent progress in the field of problems with nonstandard growth conditions and nonuniform ellipticity. Special emphasis is put on regularity theory. This is an active and by now classical field, that has witnessed several interesting and deep developments, especially during the last years. The volume gathers a substantial number of contributions written by active researchers and also features papers authored by some of the leading experts of the field. We hope that this issue will stimulate interest in the readers and will attract further researchers to these kinds of problems.
